I've been sitting here for hours now and I can't seem to get it to work. This is my first time on this site and I can't seem to find any answers that work. I may need to learn something new! Support for new features is included in AutoCAD's Upgrades for each major release. Examples include support for objects such as point clouds and periodic surfaces, which were not supported in AutoCAD 2017. In 2019 Autodesk released a new command line utility, AutoCAD Renew, allowing users to automate and schedule patch updates and AutoCAD updates. History AutoCAD started as a proprietary product from Autodesk released in 1982. It was originally a desktop publishing program, but has since moved to a more engineering/mechanical application. AutoCAD is no longer a product that can be purchased, but rather is included as part of a subscription that also includes the latest releases of AutoCAD and AutoCAD LT. Application programming interfaces AutoCAD uses application programming interfaces (APIs) to allow programmers to customize and automate its behavior. These include AutoCAD's native C++, AutoLISP, Visual LISP, VBA, and .NET APIs, and the ObjectARX (C++ library) for third-party developers. This allows programmers to use C++, Visual LISP, or any other language that can interface with these APIs to create extensions for AutoCAD, which are then available to users. AutoCAD's native APIs are designed to be quick to implement and relatively easy to use. To make AutoCAD more accessible for users, the API was simplified in version 2014.
