"unmanned" tractor appearing in
Russia on Agroinvestor In the
nearest two years a tractor with
automatic control function will
appear on Russian agricultural
market. This was reported by RBC
Daily, citing representatives of the
Rostekhnologii company and the
developer of the program, the
company Robokon. It is supposed

that the machine which is going to be produced in Kaluga at the plant of Concern "Tractor Plants" will be equipped with the "virtual" steering system. If the project is implemented the Russian tractor will be the first in the world to be equipped with such a system. It is planned that in the near future the Concern will create a working group which will be responsible for the

implementation of this project. This group will consist of the company's specialists, engineers and plant managers. According to Mikhail Bolotin, the Chairman of the Concern's Board of Directors, following the results of the meeting of the working group, which includes specialists from the plant in Kaluga, "T4" (this will be the name of the new development) will be

submitted for consideration of the Ministry of Industry and Trade. In addition, a prototype of the "T4" will be created in the near future. With this car the specialists of the concern will go to the testing grounds. Work will also be done to customize the chassis for the new platform. "We want the "T4" cars to be created using all modern materials and technologies. The car

will use completely new technical and design solutions. It will be a modern engine, platform and transmission. The car will have new options and will be safer," Harald Gruebel, first vice president of engineering at AvtoVAZ, told reporters. "It will be a completely new car that will be produced in Togliatti. It will, in fact, be a new brand for our country. It will be a

completely new car that will be produced in Togliatti," Gruebel said. According to him, the car will use absolutely new technical and design solutions.
