If you do use an anti-virus program, please run a scan of the downloaded file to be sure it has not been corrupted or altered. The downloader itself is a good anti-virus program. If you use the Downloader to download, you should then run the downloader on the file after it has been saved. Open the downloaded file with the downloader that you use. If the file has a.tar.gz,.zip or.rar extension, simply double-click the file to extract it. You can now unzip the files to a convenient directory. We recommend that you move the files directly to the /driver folder on the root of your hard drive (for example, C:\driver). If the files you downloaded are from a CD, you can extract them directly to the /driver folder on the root of your hard drive (for example, C:\driver). Open the extracted folder and then open the 'install.bat' file. You should now see the driver CD's contents. If you do not, then click on the directory you just extracted and then select the 'install.bat' file. Make sure to click on the "Run as Administrator" option on the top. Select 'No' when the window says 'Do you want to extract the contents to the destination folder?' Click OK to execute the install.bat file. You should now have installed the Samsung driver(s).
