

Description: KKFI 90.1FM RADIO is a small Yahoo! widget developed specifically for helping you listen to an online radio station from Kansas directly from the comfort of your desktop. The tool can be deployed on all Windows versions out there, provided that you have the Yahoo! Widget Engine platform installed on the host, otherwise you cannot make use of its capabilities. Simple design and setup options KKFI 90.1FM RADIO can be installed on your computer in a short amount of time and with minimum effort. The gadget boasts a minimalist GUI that embeds a few playback controls. There are no configuration settings hidden under the hood. All audio playback options are revealed in the main window. You cannot appeal to a help manual to find out more details about its audio streaming capabilities. However, you can quickly get an idea about how to make the most out of its functions. You are offered the possibility to start or stop the audio streaming process. The widget is able to streams KKFI 90.1FM Kansas City, Missouri Community Radio. The radio station broadcasts 24/7 all year round. What's more, you are allowed to adjust the volume pretty quickly thanks to the integrated bar and click in the main window in order to access the official webpage of the radio station via your default web browser. Tests have pointed out that KKFI 90.1FM RADIO carries out tasks quickly and without errors. It remains light on system resources so you do not have to worry that it hampers the overall performance of the PC. There are some other options implemented by Yahoo! Widget Engine for helping you hide or close the gadget, ignore all mouse events, turn off the ability to drag the widget with the mouse, alter the opacity, as well as have the widget always on top of other windows. Final ideas To sum things up, KKFI 90.1FM RADIO helps you access an online radio station with ease. It is suitable especially for less experienced users.Q: How do I push a branch from an EGit remote to GitHub? I created a new branch on a remote GitHub repository using EGit, but I want to push my branch to the remote. However, I am unable to select the remote from the option "Branches to push". How can I push my branch to the remote? A: After you selected the remote repository with branches to push, and the branch to push
